COMPACT COOL®

COMPACT COOL COOLING UNIT MANUFACTURERS (PTY) LTD
Reg. No. 197600414707
BS EN Iso 9001:2000 CERTIFIED
MEMBER OF PROUDLY SOUTH AFRICA

Compact Cool Cooling Unit Manufacturers (Pty) Ltd was established in 1976 and operates from its own premises in Johannesburg.

Our staff are specialized in there fields and strive to always provide our customers with the same quality product and service as in the past.

The company designs, manufacturers and services industrial and laboratory cooling equipment for air and water cooling.

Our standard product range includes

• Water chillers (air cooled, and water cooled) •Ice banks •Air handlers
•Air conditioning units (Clip-on) •Chill boxes

BS EN ISO 9001:2000 certified and a member of Proudly South Africa campaign.

Certificate no: FM 77963

COMPONENTS

- Reciprocating compressor(s).
- Condenser coil(s) with copper tubes mechanically expanded into aluminium fins.
- Axial impeller fan(s).
- Stainless steel grade 304 tank insulated with high density polyethylene foam.
- Direct expansion open type evaporator in copper.
- Close-coupled centrifugal pump.
- Electrical panel, incorporating:
  - mains isolator
  - circuit breaker(s)
  - contactor(s) and overload(s)
  - compressor anti-cycle timer (TC 7/330)
- On/off switch
- Signal lamps for main functions
- Electronic multi- stage (TC 40/330) thermostat for water temperature setting with lead/lag control of compressor sequence.
- Mechanical safety thermostat as protection against high or low water temperature.
- Tank water level safety switch
- Digital indication of tank (water leaving) temperature.
- Water pump pressure gauge.
- Compressor hour meters (TC 60/330)
- Make-up ball valve in water tank (TC 10/330).
- Suction stainer of pump.
- Isolating valves on water tank inlet and outlet (TC 10/330).
- Low ambient control by condenser fan speed control (TC 10/25) and cycling of fans (TC 30/330).
- Adjustable feet (TC 1/75).

INSTALLATION

- All units are assembled, internally wired and charged with refrigerant R22 at the factory.
- All that is required on site are water pipe connections and wiring to the mains power supply.

OPTIONS

- Flashing alarm light.
- Compressor hour meter (TC 1/50).
- Suction and discharge gauge for each compressor.
- Centrifugal type condenser fan(s) for duct application. Condenser heat may be diverted outside and during cold weather warm air can be diverted inside for space heating.
- Castors for easy manoeuvrability (TC 1/75).
- Single phase and low voltage protection.
- Stand-by pump plus pump selector switch.
- Automatic change-over of pump in the event of pump failure.
- Other pump models for different flow and pressure.
- Condenser with copper fins.
- Standard condenser with epoxy coated fins
- Frame hot dip galvanized.
- Other refrigerant.
- Scroll compressor.

FEATURE

- Units are self-contained and compact for easy installation
- Test run before delivery.
- Frame constructed from heavy gauge square tube. Galvanized covers removable for easy access to any part.
- Textured electrostatic powder coating finish.
- Large water tank to reduce stop/starts of compressor(s).
- Models TC 40/240 have multiple independent refrigeration systems.
- Units are designed for continuous operation at high ambient temperature.
- Because of the evaporator design the units can operate within a wide water temperature range.
- Manufactured in South Africa.

COMPONENTS

- Stainless steel grade 304 tank, insulated with high density polyethylene foam.
- Mild steel frame constructed from heavy gauge tubing, plus galvanised covers.
- Direct expansion galvanised freezer plates.
- Refrigeration (condensing) unit(s) consisting of compressor, condenser coil of copper tubes mechanically expanded into aluminium fins, and refrigerant receiver.
- Impeller type agitator(s) (IB 100/700).
- Close-coupled centrifugal water pump with suction strainer/foot valve.
- Ice thickness thermostat controlling ice build-up on freezer plates.
- indication of ice water temperature.
- Electrical panel, incorporating:
  - mains isolator
  - circuit breaker
  - contractor(s) and overload relay(s)
  - compressor anti-cycling timer(s)
  - on/off switch for each refrigeration unit
  - on/off switch for pump/agitator(s) running simultaneously
  - signal lamps for main functions

4 x 2,2	100	21100	6310 x 3150 x 2500	5500	26.600	2 x 50	50

OPTIONS

- Flashing light in case of failure
- Compressor hour meter(s)
- Suction and discharge gauge with shut-off valves
- On/off switch with auto-position for remote control of pump/agitator(s)
- Stand-by pump and selector switch
- Automatic change-over in case of pump failure
- Multiple INDEPENDENT refrigeration units (IB100/300)
- Single phase and low voltage protection.

INSTALLATION

- All ice builders are assembled, internally wired and charged with refrigerant R22 at the factory.
- All that is required on site are water pipe connections and wiring to the mains power supply.

FEATURES

- Units are self-contained and compact for easy installation.
- Test run before delivery.
- Frame constructed from heavy gauge tube, galvanised covers removable.
- Paint finish : frame in industrial enamel and covers in polyester electrostatic powder coating.
- Models IB 400/700 have multiple INDEPENDENT refrigeration systems.
- Units are designed for continuous operation at high ambient temperature.
- The direct expansion system keeps the refrigerant charge small against plants which operate on a flooded system.
- The impeller type agitator avoids contamination, oxydization and warming-up of the ice water occuring when compressed air is used for agitation.
- All components manufactured or sourced in South Africa.

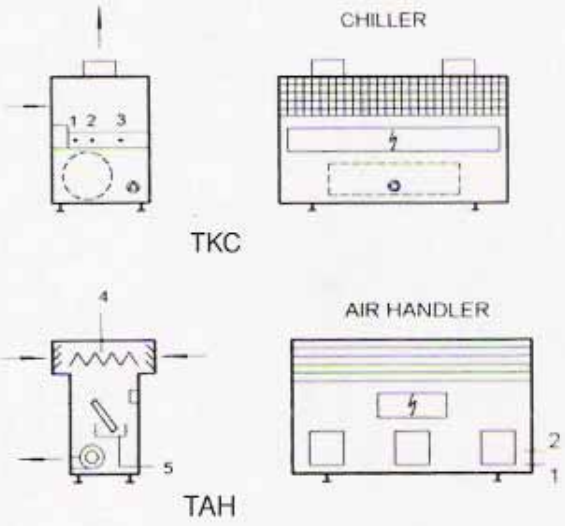
WATER CHILLERS Type TKC
AIR HANDLING TYPE TAH

TKC 33000

Water Chillers and matching Chilled Water Air Handling Units.

TAH 7500



— = Air Flow
= Water Pump
= Control Panel

1 = Return Water
2 = Supply Water
3 = Make Up Water
4 = Filter
5 = Drain

TAH 22500

GENERAL DESCRIPTION

COMPACT COOL TKC Water Chillers, and TAH Air Handling Units are suitable for indoor or outdoor applications. The Water Chillers are designed for very high ambient temperatures. All units have aluminium profile frames, and the covers are made of aluminium. The covers for the Air Handling Units are also insulated.

Certificate no: FM 77963

COMPONENTS (CAPACITY)

- Reciprocating compressor.
- Condenser coil(s) with tubes aluminium fins.
- Axial impeller fan(s)
- Fibreglass water tank.
- Evaporator Plate Heat Exchanger.
- Close-coupled centrifugal pump.
- Filter drier/liquid solenoid valve/ sight glass/expansion valve.
- Electrical panel, incorporating:
  - mains isolator
  - circuit breaker(s)
  - contractor(s) and overload(s)
  - compressor anti-cycle timer
  - Timer module anti-cycle timer & LP by-pass
  - Air Flow switch timer
- On/off switch
- Signal lamps for main functions (LED)
- Electronic thermostat with digital indication of temperature
- Mechanical safety thermostat as protection against low water temperature.
- Flow switch.
- Tank water level switch.
- Compressor hour meter.
- Isolating valves on water tank inlet and outlet.
- Low ambient control by condenser fan speed.
- Adjustable feet.

COMPONENTS AIR HANDLING UNIT

- Chilled water coil with copper tubes aluminium fins.
- Direct drive Fan(s) (bottom discharge)
- Electrical panel.
- Temperature controller.
- Temperature controlled 3 way water valve.
- Primary and secondary air filters.
- Air flow switch.
- Water flow switch.
- Dirty filter switch.
- Air damper (return/fresh air)
- Fan speed control manually adjustable

OPTIONS

- Single phase and low voltage protection.
- Other pump models for different flow and pressure.
- Condenser with copper fins.
- Suction and discharge gauge.
- Heating.

FEATURES

- Units are self-contained and compact for easy installation.
- Test run before delivery.
- Textured electrostatic powder coating finish.
- Large water tank to reduce stop/starts of chillers.
- Units are designed for continuous operation at high ambient temperature.
- Manufactured in South Africa.

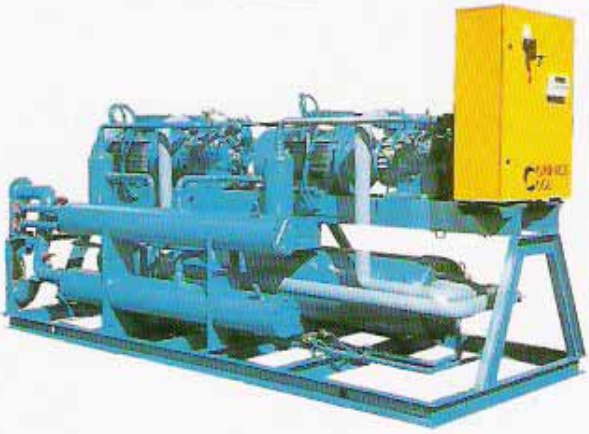
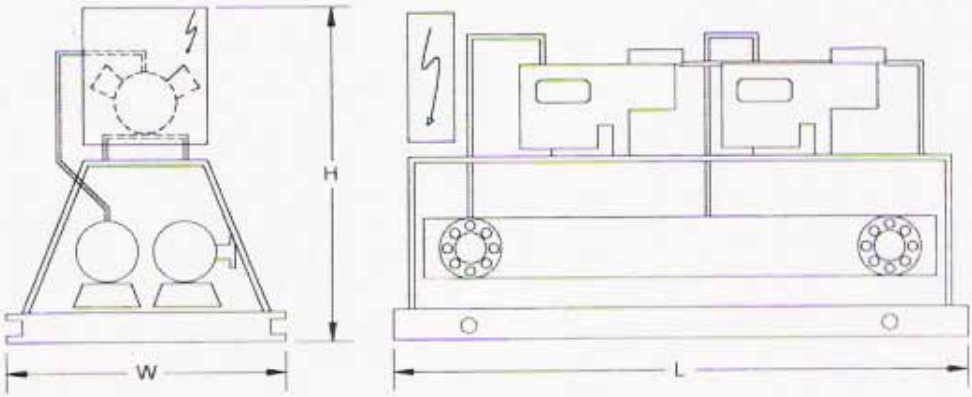
WATER CHILLERS Type SCW

GENERAL DESCRIPTION

COMPACT COOL SCW Water Chillers are designed for industrial process cooling or air-conditioning. In the evaporators and condensers, the shell is made of rolled carbon steel with high efficiency copper tubes.





Certificate no: FM 77963

(Shell and Tube Chillers)

COMPONENTS

- Semi-hermetic compressor(s).
- Shell and tube condenser(s).
- Shell and tube evaporator(s).
- Electrical panel, incorporating:
  - mains isolator
  - circuit breaker(s)
  - contactor(s) and overload(s)
  - part - wind start
  - anti-cycle start
  - on/off switch
  - signal lamp.
- Step controller.
- Freeze thermostat.
- Pressure gauges.
- HP switch unloading.
- LP switch unloading.
- Oil pressure switch.
- HP/LP switch.
- Compressor hour meter(s).
- Flow switch with timer.

INSTALLATION

- All units are assembled, internally wired and charged with refrigerant R22 at the factory.
- All that is required on site are water pipe connections, wiring to the mains power supply and interlocks for the evaporator and condenser pump.

OPTIONS

- Voltage monitor.
- Head pressure control.

FEATURES

- Units are self-contained and compact for easy installation.
- Test run before delivery.

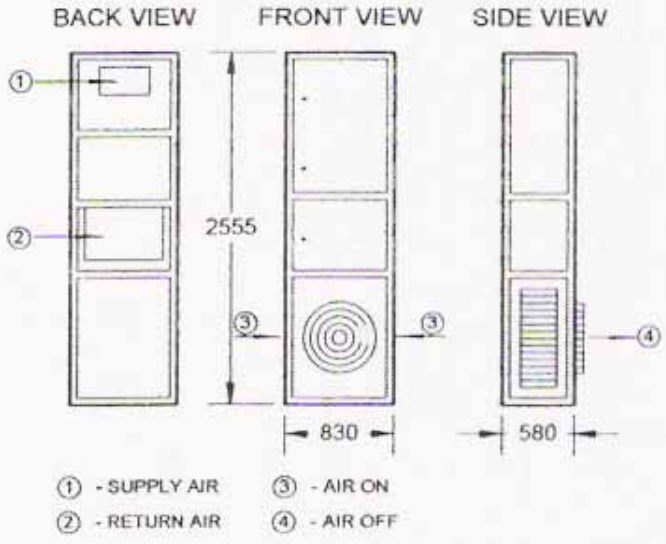
AIR CONDITIONING UNITS (CLIP-ON)

GENERAL DESCRIPTION

The Compact Cool Clip-on Package unit is suitable for indoor or outdoor applications. The frame is made of aluminium profile and the condenser unit can be removed to install remotely for different applications. One of the features of this unit is the low condensing pressure which enables it to perform in extreme ambient temperatures.



Certificate no: FM 77963

Telecommunication Cooling Systems

Above conditions are based at sea level, ambient 32 ° C, return air 23 ° C db, 16 ° C wb.

COMPONENTS

- Reciprocating compressor.
- Condenser coil with copper tubes with aluminium fins.
- Evaporator coil with copper tubes with aluminium fins.
- Axial condenser fan.
- Centrifugal evaporator fan.
- Heater bank.
- Electrical panel
  - main isolator
  - circuit breaker, and fuses
  - contactors and overloads
  - compressor anti-cycle timer
  - . and LP by pass timer.
- On/off switch.
- Fault/function indication lights (led)
- Cool-heat control thermostat with dead zone.
- Heater safety thermostat.
- Humidity switch.
  Dirty filter switch.
- Air flow switch.
- Low ambient control by variable condenser fan speed.
- Manually adjustable evaporator fan speed.
- All units are assembled, internally wired and charged with refrigerant R22 at the factory.
- Manufactured in South Africa with local after sales service.

OPTIONS

- Condenser and/or evaporator with epoxy coated fins.
- Condenser and/or evaporator with copper fins.
- Top discharge evaporator fan.
- Units are self-contained and compact for easy installation.
- Test run before delivery.
- Frame constructed from aluminium profile. Insulated aluminium covers removable for easy access.
- Textured electrostatic powder coating finish.
- Units are designed for continuous operation at high ambient temperatures.
- By pass air damper.
- Washable air filter.
- Clip-on fixing bolts supplied.

GELÖTETE PLATTENWÄRME-ÜBERTRAGER

Aufbau und Wirkungsweise
Die WTT-Plattenwärmeübertrager bestehen aus einer Anzahl geprägter Edelstahlplatten, die in einem speziellen Lötverfahren miteinander verbunden werden. Beim Zusammenfügen wird jede zweite Platte um 180 Grad in der Ebene gedreht, wodurch sich zwei voneinander getrennte Strömungsräume bilden, in denen die beteiligten Medien im Gegenstrom geführt werden. Die Prägung der Platten verursacht einen hochturbulenten Durchfluß. Dies ermöglicht eine sehr effektive Wärmeübertragung schon bei geringen Volumenströmen.

Einsatzgebiete
Typische Einsatzgebiete für WTT-Plattenwärmeübertrager sind die Haustechnik (Warmwasserbereitung, Fußbodenheizung), Fernwärmeübergabestationen, Verdampfer(AE)/Kondensator in der Kältetechnik, Industriekühlung (Ölkühler).

Auslegung
Durch unser ausgereiftes Computerprogramm gewährleisten wir eine optimale Auslegung für Ihren Anwendungsbereich.

Isolierung & Anschlußverschraubungen
WTT-Plattenwärmeübertrager können komplett mit Isolierung (PU-Hartschaum) und Anschlußverschraubung (wahlweise mit Löt-, Gewinde- oder Schweißeinsatz) bestellt werden.

Werkstoffe:
Platten: 1.4401 Lot: Kupfer (WP, AE)
Nickel (NP)

Betriebsbedingungen
max. Betriebsdruck: 40 bar (WP,AE)
16 bar (NP)
max. Betriebstemp.: 195° C

Wärmeleistung:
bis 2000 kW

BRAZED PLATE HEAT EXCHANGERS

Construction and operation
WTT brazed plate heat exchangers consist of a pack of refined steel plates which are brazed together in a furnace. When assembling the pack every second plate is turned 180° in the plane. There are two separate flow channels with two mediums in counter current. The design of the plates creates a high turbulence. The results are outstanding heat transfer properties also at small flows. All the components of the exchanger take part in the heat transfer.

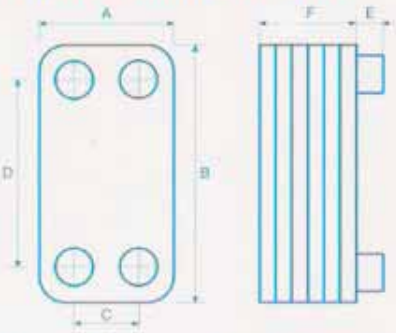
Application
Typical applications include:
heating, hot-water producing plant, floor heating, compact district heating stations, evaporators (AE)/condensers in heat pumps and liquid chillers, oil-cooler.

Customer support
We will naturally help you optimize a WTT brazed heat exchanger for any of your applications. This work is performed with the assistence of our computer program.

Isolation & connection
WTT brazed plate heat exchanger may be ordered with isolation (PUR or Aeroflex)
and fittings (female, external thread or welding connection fittings).

Materials:
Plates: 1.4401 Solder: Copper (WP,AE)
Nickel (NP)

Performance:
Operating pressure: max. 40 bar (WP,AE)
16 bar (NP)
Operating temperature: max. 195°C
Capacity per unit: up to 2000 kW



ECHANGEURS THERMIQUES A PLAQUES BRASEES

Conception et Fonctionnement
Les échangeurs thermiques à plaques brasées WTT sont constitués par un empilage de plaques matricées en inox qui sont soudées entre-elles par un procédé spécial de brasage au cuivre. A l'empilage une plaque sur deux est inversée à 180 degrés afin de créer deux zones de circulations séparées dans lesquelles les liquides ou les gaz utilisés circuleront en sens contraires. Le matriçage spécial des plaques engendre des flux à hautes turbulences ce qui permet un échange thermique extrêmement performant même dans les cas de faibles courants circulatoires.

Utilisations
Utilisations typiques des échangeurs thermiques WTT à plaques brasées:
production d'eau chaude sanitaire, chauffage par le sol, stations de chauffage à distance, condensateurs/évaporateurs (AE) dans la technique du froid, systèmes de refoidissement (radiateurs à huile), divers processus industriels ect.

Definition des échangeurs
Un logiciel performant nous permet de déterminer de facon optimale les caractéristiques de l'échangeur le mieux adapté à vos besoins.

Isolation et raccordements
Les échangeurs thermiques WTT peuvent étre livrés complets avec leur isolation soit en mousse de polyuréthane (PU) soit en modèle Aéroflex ainsi qu' avec leurs raccordements soudés ou brasés.

Matériaux:
Plaques en inox: 1.4401,
brasure au cuivre (WP, AE)
Nickel (NP)

Performances:
Pression max. d'utilisation: 40 bar (WP,AE)
16 bar (NP)
Température max. d'utilisation: 195°C

Puissances:
Jusqu'à 2000 kW
